AI in the session

From the training session “AI in the Session: What Every Tutor Needs to Know”

HOW IT WORKS

A chatbot predicts likely words. It doesn’t know whether it’s right.

HOW IT GOES WRONG

- It can make things up (hallucination).
- It tends to agree with you, even when you’re wrong (sycophancy).

THREE QUESTIONS TO ASK FIRST

1. What does this course allow for this assignment?
2. What are you trying to learn here?
3. Which part of this has to be your own thinking?

ALWAYS

- Check AI answers against the textbook, notes or a worked example.
- Have the student explain each step in their own words.

NEVER

- Complete graded work, with or without AI.
- Put a student’s name, ID or grades into an AI tool.
